

ONE AREA DISTINCTIVE TO ITS PRIORITY AND THRUST

Growing of Basil Plants by Scattering Seeds in the Open Space:

Preface:

Since we all know that the basil plant is an Ayurvedic plant. It is used as medicinal Plant. And it also yields more oxygen than any other plant. And it grows easily anywhere and anyplace especially in the rainy season. In this best practice the students are asked to collect the basil seeds and then to scatter it in the open space nearby to the college premises and nearby to their villages. The purpose is that the whole premises in the college or of nearby college would be full basil plants. And the students as well as the students would get pure oxygen wherever they would go and come either to college or to their villages.

Objectives:

1. To grow more and more basil plants
2. To make proper use of the open space and barren space.
3. To make students and people to understand the importance of basil seeds and plants
4. To keep students engage in the environmental activities.
5. To help to reduce the air pollution nearby of the college and of the villages also.

Context:

1. Proper use of the basil seeds
2. To keep the environment clean and safe
3. To provide students and people pure oxygen
4. To make students the importance of the basil plant
5. To keep busy students in the environmental activities.

Evidence of Success:

1. The students voluntarily take part in this eco-friendly activity.
2. The college premises have many basil plants.
3. The principal and the management appreciate such eco-friendly activity.
4. Many students have also begun this activity in their villages.
5. The premises of college have become lush green and pollution free.
